

TRC5200 (WEST GERMANY)

MEMO-SCRIBER DICTATING/TRANSCRIBING MACHINE

PRODUCT CODE No.
142 470 02

SPECIFICATIONS

Power Source	
AC Adaptor	DC 9V
Output Power	1000mW (Max.)
Recording System	AC Bias, 1/2 track
Erasing System	DC Erasing
Erasing Ratio (Over all/2.4cm)	More than 46dB
Quick Erasing System	DC Erasing
Quick Erase Ratio	More than 50dB
Frequency Response (Overall)	250Hz ~ 4,000Hz
Signal to Noise Ratio	more than 35dB
Tape Speed	
1.2cm	15/32ips. $\pm 6\%$
2.4cm	15/16ips. $\pm 3\%$
Tape Speed Control	
Fast	+20%
Slow	-20%
Wow & Flutter (at 2.4cm)	0.5% RMS

Torque	
Playback mode	5 ~ 10g-cm
Fast Forward/Rewind mode	more than 25g-cm
Fast Forward Time (at 2.4cm)	120sec. (with MC-60)
Rewind Time (at 2.4cm)	120sec. (with MC-60)
Backspace Time	
0	0 sec.
5	2 ~ 3sec.
10	6 ~ 7sec.
Harmonic Distortion (K3)	less than 10%
Warning Tone Signal	714Hz
Index Signal	15Hz
Terminal Impedance	
TEL. Record	1k Ω
Earphone	8 Ω
Dimensions	220(W) x 41(H) x 159(D)mm
Weight	800g

—Specifications subject to change without notice.—

DISASSEMBLY INSTRUCTIONS

GENERAL REMARKS

- Before disassembling the unit, spread a soft rubber mat or a cloth on the workbench to avoid scratches and grease stains.
- Do not spread anything which is likely to cause static electricity because transistors and ICs may be easily damaged by it.
- Reassemble the unit, noting the kinds of screws and the soldering and arrangement of the leads. Refer to "Circuit Diagram and Exploded Views" for correct assembly.
- Reassemble in reverse order.

CABINET TOP REMOVAL

1. Remove the four screws (1 ~ 4) fastening the Cabinet Bottom.
2. Detach the Cabinet Bottom by lifting it from the unit.

P.C.BOARD AND MECHANISM REMOVAL

- Detach the Cabinet Bottom following instructions.

- When detaching the P.C.Board only:

1. Remove the four screws (5 ~ 7 and 9) fastening the Amplifier P.C.Board and lift the side of the Volume Controls.
2. Disconnect the connectors of the LED P.C.Board and Head from the Amplifier P.C.Board.
3. Turn over the P.C.Board toward the back of the unit with caution not to damage the lead wires.

- When detaching the P.C.Board together the Cassette Mechanism:

1. Remove the three screws (5, 6 and 8) fastening the P.C.Board and lift the side of the Volume Control.
2. Disconnect the connector of the LED P.C.Board and turn over the back of the unit with caution not to damage the lead wires.

STANDARD MAINTENANCE

Tape Head and Capstan Cleaning

Periodically clean the tape head, capstan drive shaft and other tape handling surfaces to insure proper tape handling and optimum frequency response. Use a cotton swab dipped in head cleaner or denatured alcohol to clean all tape handling surfaces.

Tape Head Demagnetization

Do not use magnetized tools near the tape head, since they can magnetize the head. After long periods of use, the head will retain a small amount of residual magnetism. A magnetized head will result in loss of high frequency response and increased noise. Use a standard tape head demagnetizer, and follow the instructions supplied with it, to demagnetize the head.

ADJUSTMENTS PROCEDURES

GENERAL REMARKS

- Before attempting to adjust the mechanism of this unit, wipe the tape contacting surfaces (of the pinch roller, Record/Playback head and capstan) clean as well as the contact surfaces of the driving parts (motor pulley, flywheel, belts) with a piece of soft cloth soaked in alcohol. Oil and grease stains may cause trouble.
- Handle the belt carefully because grease easily attaches to it. Then check the used rubber parts. If the rubber has deteriorated or is scratched, replace the parts with new one, also confirm that the contacts of the leaf switch is not deformed.

EQUIPMENT NEEDED

- VTVM
 - Frequency counter
 - Dummy load (8Ω)
 - Test tapes
 - 3kHz test tape (Example: Olympus OA-W221) for Tape Speed Adjustment
 - 3kHz test tape (Example: Olympus OA-A211) for Head Azimuth Adjustment
 - Alignment Tool
- Before the electrical adjustments, set the switch and controls as follows:**
- Speed switch 2.4cm
 - Backspace control Short
 - Speed control Center (click position)
 - Tone control Max.
 - Volume control Arbitrary

ADJUSTMENT PROCEDURE

Adjustment Item		Connection	Dummy Load	Measuring Instrument	Test Tape	Adjustment	Measuring Value
Tape Speed	2.4cm	Earphone Jack	8Ω	Frequency Counter	OLYMPUS OA-W221	P201	3,000Hz ±3%
	1.2cm					P202	1,500Hz ±6%
Head Azimuth				VTVM	OLYMPUS OA-A211	Azimuth Screw	Maximum

TAPE SPEED ADJUSTMENT

- Set the Tape Speed Switch to 2.4cm or 1.2cm. While playing back the test tape adjust the tape speed by turning the potentiometer (P201 or P202) on the P.C.Board with an alignment tool.

HEAD AZIMUTH ADJUSTMENT

- After the adjustment, secure the adjusting screw with paint or glue.

CIRCUIT DESCRIPTION

POWER SUPPLY

When the POWER switch is turned on, all circuits are supplied with voltage from the AC Adapter. The circuits supplied with voltage are of two types: circuits supplied directly with a voltage of +9V and circuits supplied with a constant-voltage of +5V.

- The circuits supplied directly with a voltage of +9V are:
 - Audio amplifier (IC1)
 - Remote Control Circuit (IC4)
 - Solenoid Drive Circuit

- The circuits supplied with a constant-voltage of +5V are:
 - MPU (Microprocessor unit) IC3
 - Index Signal Record circuit
 - Index Signal Search circuit
 - Rotation Detection circuit
 - Motor Governor circuit

CIRCUIT DESCRIPTION (Continued)

PLAYBACK CIRCUIT

The signal from the tape is played back according to the following process:

Record/Play Head (HD1-1) → Analog Switch (IC2-4) → Pre-amplifier (Pin 9 of IC1 → Pin 6 of IC1) → Tone Control (VR1) → Volume Control (VR2) → Power Amplifier (Pin 4 of IC1 → Pin 1 of IC1) → Earphone Jack (J2) → MIC/Speaker Switch (S8) → Speaker (SP1)

When the PLAY button is pressed, the Pin 40 of IC3 becomes "L" level and when the Hand Control is set to the PLAY mode, 300mV applies to the Pin 8 of IC4, then the Pin 1, 2, 3, 4 and 6 of IC4 become "H", "H", "H", "H" and "L" level. The MPU (IC3) recognizes this two types modes the playback mode and its MPU(IC3) makes the Pin 12 of IC3 "L" level. Therefore, the Q20

and Q21 become "ON" and the Solenoid (SL1) is set to "ON".

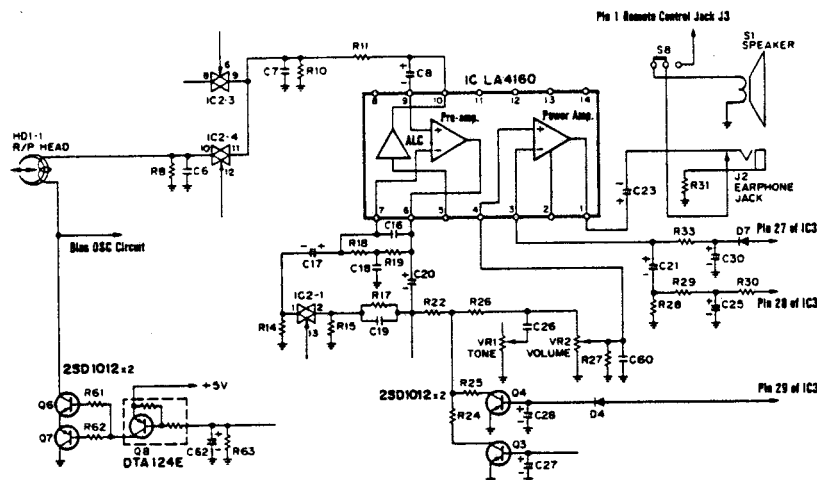

Make the Pin 13 of IC3 "L" level and make revolution the Motor (M1).

Make the Pin 22 of IC3 "L" level and set the Q18 and Q19 to "ON", then operate the Solenoid (SL1). After that, make the Pin 12 of IC3 "H" level and set the Q20 and Q21 to "OFF". The electric current of consumption will be cut down.

The MPU (IC3) makes the Pin 16, 17 and 19 of IC3 "H", "L" and "H" level and the Audio Amplifier will be operated.

The Analog Switch (IC2-1) goes ON so that the equalizer and gain of the Pre-amplifier becomes the constant of R14, R15, R16, R17 and C19. The Muting Circuit operates because Pin 15 of IC3 becomes "H" level and Q6, Q7 and Q8 go ON.

PLAYBACK CIRCUIT

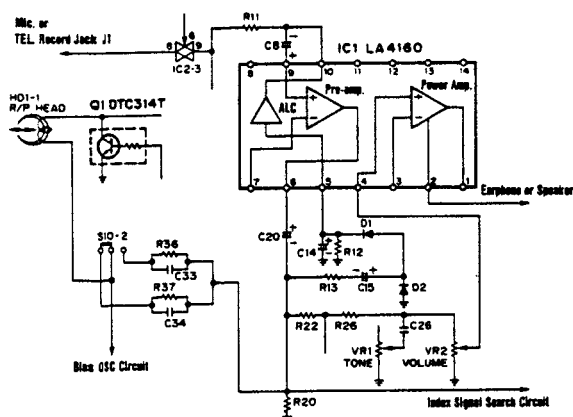

RECORDING CIRCUIT

The signal from the Microphone or the TEL. Record Jack (J1) is recorded on the tape according to the following process:

Mic. or TEL. REC. Jack (J1) → Analog Switch (IC2-3) → Pre-amplifier (Pin 9 of IC1 → Pin 6 of IC1) → Record Equalizer (R36 & C33, R27 & C34) → Record/Play Head (HD1-1)

RECORDING CIRCUIT

While recording, the Pin 15 of IC3 becomes "L" level and the Bias OSC circuit, muting circuit and LED (DICTATE) drive circuit operate because the Q22 becomes "ON".

When the hand control is set to DICTATE, the Q33 become "ON" and no monitoring is made because the Volume Control (VR2) is muted.

In the TEL. Record mode, however, as the TEL REC switch (S6-1) is set the "ON", the jack switch (16) becomes "OFF" when the earphone is plugged in, and the Pin 3 of IC1 becomes "L" level. Therefore, monitoring is made through the earphone.

INDEX SIGNAL RECORDING

If the INDEX button is pressed with the hand control set to DICTATE in the record mode, the Index Signal is recorded on the tape in the following process:

Pin 18 of IC3 → Q12 → Q11 → Record/Play Head (HD1-1)

When the hand control is set to DICTATE, 500mV applied the Pin 8 of IC4 and the Pin 1, 2, 3, 4 and 6 voltage level of IC4 become "H", "H", "L", "L" and "L" level. Then the MPU (IC3) recognizes the DICTATE mode and the same condition will be made described in the RECORDING CIRCUIT.

When the INDEX button is pressed, the Pin 34 of IC3 becomes "L" level, and 15Hz rectangular wave for 1.5 second as an Index Signal produces from the Pin 18 of IC3.

This signal goes through the Low Pass Filter (R53, C43, R52, C42, C41, R50, R51 and C40) and its signal becomes triangle wave and it is amplified by the Q12 and Q11. Then the signal is recorded on the tape by the Record/Play Head (HD1-1). At the

CIRCUIT DESCRIPTION (Continued)

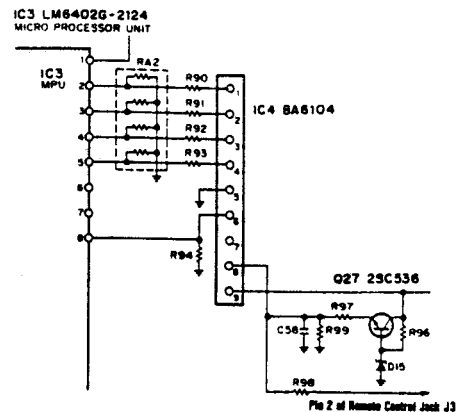

REMOTE CONTROL

By pressing the Hand Control or the Foot Control Switch, the input voltage of Pin 8 of IC4 and each voltage of Pin 1, 2, 3, 4 and 6 of IC4 becomes as shown in the diagram below.

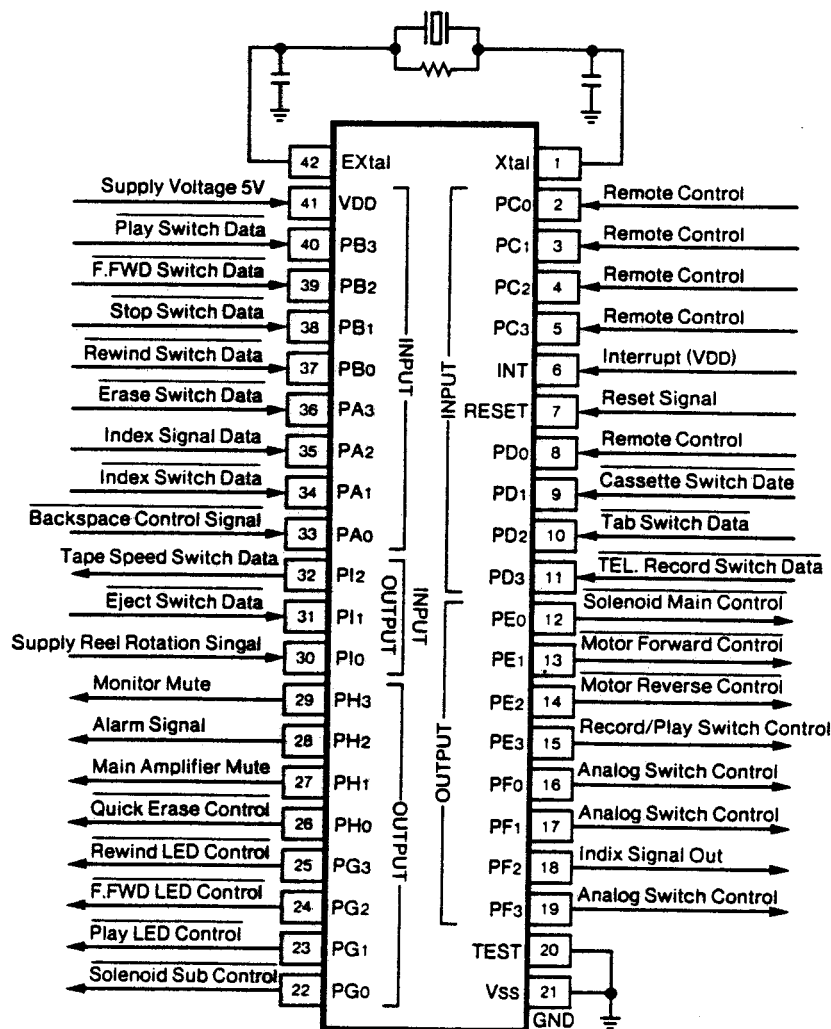

Function	Pin 8	Pin 6	Pin 4	Pin 3	Pin 2	Pin 1
No Operation	1,300mV	H	H	H	H	H
Play	900mV	L	H	H	H	H
Backspace	700mV	L	L	H	H	H
Dictate	500mV	L	L	L	H	H
F.Forward	300mV	L	L	L	L	H
Back	0mV	L	L	L	L	L
Index	500mV	L	L	L	H	H

MPU (IC3) reads in the output of IC4 and each voltage of Pin 1, 2, 3, 4 and 6, and then it performs the operations (PLAY, BACKSPACE, INDEX producing, DICTATE, F.FWD and BACK).

REMOTE CONTROL

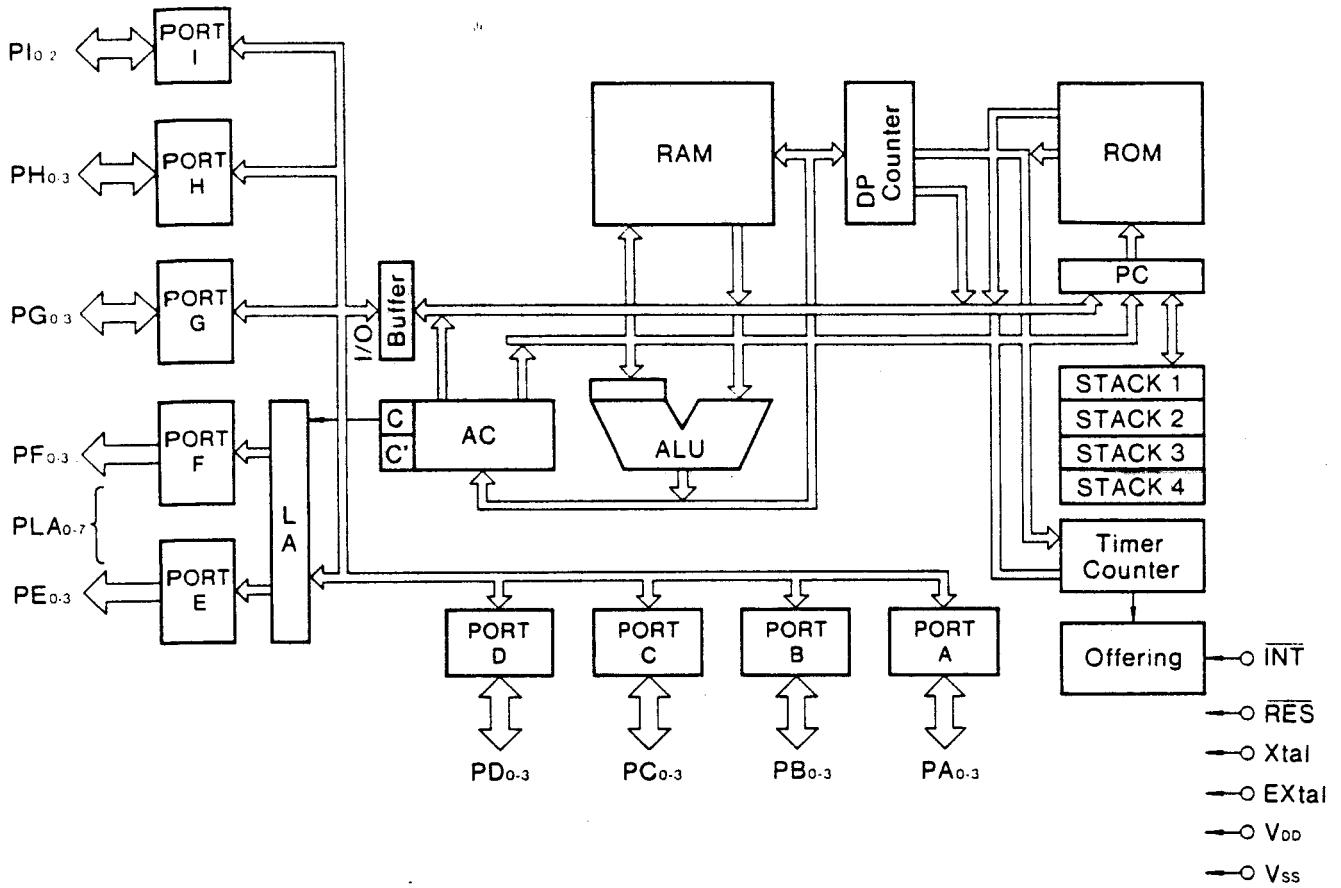

MICROPROCESSOR UNIT (IC3) PORT FORMAT

NOTE:

The signals with lines down above their names show that they are active in LOW level.
